

The Lead Free Future Act is a bold plan to **protect the next generation**. It matches the level of investment with the scale of the problem. Through **leveraged federal investment and prevention-focused standards**, this legislation aims to eliminate the major sources of lead exposure for America’s children **over the next five years**. The main elements of the legislation are:

1. Investments:

- a. **\$12 billion in Lead Clean-Up Grants over 5 years** (\$2.4 billion annually)
- b. **\$500 million over 5 years** for the **Centers for Disease Control and Prevention’s Childhood Lead Poisoning Prevention Program** (\$100 annually)

2. Policies:

- a. A mandate for **states and jurisdictions to move to the CDC-recommended blood lead reference level** in order to be eligible to receive any federal lead poisoning prevention funds
- b. A requirement that **lead-based paint and lead hazards in drinking water and soil are assessed and remediated prior to sale, transfer or occupancy of federally-assisted properties**

Partners and members are encouraged to share “The Lead Free Future Act” online. In this communications package, you’ll find suggested text and graphics for sharing the report in your newsletters, on websites, and on social media accounts.
